

Attention as Evidence — Chest Radiograph Draft

Film: 00023097_001.png · View: PA · Generated 2026-09-06 14:41

This is an AI-generated draft produced for research and educational purposes only. It has not been reviewed by a radiologist and must not be used for clinical decision-making.

Original film

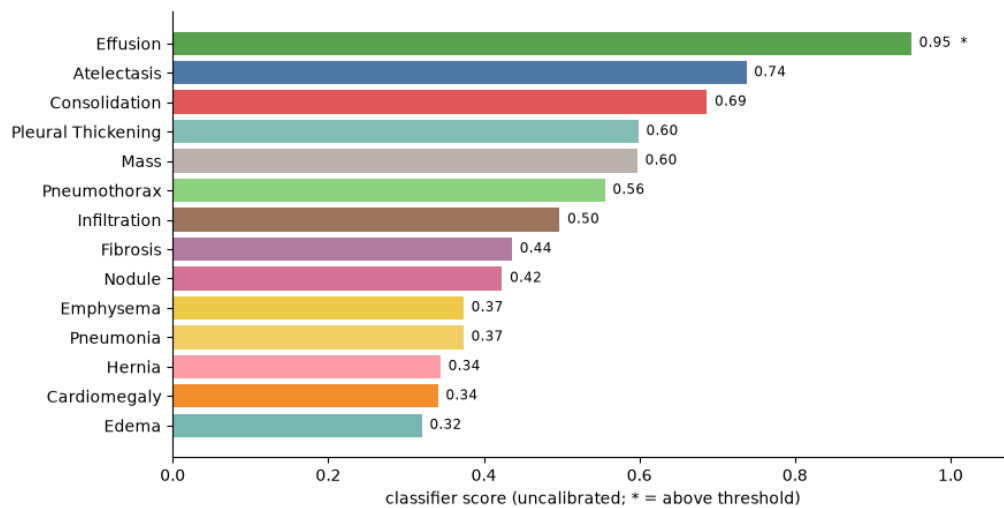

Flagged findings, LayerCAM (blocks 3+4); outline = region at 50 % of peak; x = peak

1. Classifier findings

Finding	Score	Threshold	Flagged	Attention zone
Effusion	0.95	0.78	yes	right and central mid zone
Atelectasis	0.74	0.74		right and central mid zone
Consolidation	0.69	0.75		right and central mid zone
Pleural Thickening	0.60	0.72		
Mass	0.60	0.83		
Pneumothorax	0.56	0.72		
Infiltration	0.50	0.65		
Fibrosis	0.44	0.62		
Nodule	0.42	0.78		
Emphysema	0.37	0.83		
Pneumonia	0.37	0.56		
Hernia	0.34	0.47		
Cardiomegaly	0.34	0.81		
Edema	0.32	0.81		

Scores are uncalibrated model outputs (DenseNet-121 trained on 77,988 NIH films, macro AUROC 0.812 on the official test split). Thresholds are per-finding F1-optimal values fitted on held-out data.

2. Explanation quality

How often this model's heatmap for each finding landed inside the radiologist's box in our evaluation (53 boxes; chance about 7 %). This is the reliability of the explanation, not of the diagnosis.

Finding	Evaluated boxes	Peak-in-box rate	Mean IoU
Effusion	8	3/8 (38%)	0.15
Atelectasis	11	5/11 (46%)	0.16
